Sequence 94, Application US/09804980

Publication No. US20030147897A1

GENERAL INFORMATION:

APPLICANT: Statens Serum Intitut
APPLICANT: Anderson, Peter

TITLE OF INVENTION: M. Tuberculosis Antigens
FILE REFERENCE: 67001-2002.4

CURRENT APPLICATION NUMBER: US/09/804,980

CURRENT FILING DATE: 2001-03-12

NUMBER OF SEQ ID NOS: 257

SOFTWARE: Patentin version 3.0

SEQ ID NO 94

LENGTH: 308

TYPE: PRT

ORGANISM: Mycobacterium tuberculosis

SEQUENCE 10, Application US/10468356

Publication No. US20040197896A1

GENERAL INFORMATION:
APPLICANT: COLE, STEWART

ITILE OF INVENTION: COMPARATIVE MYCOBACTERIAL GENEOMICS AS A TOOL FOR TITLE OF INVENTION: IDENTIFYING TARGETS FOR THE DIAGNOSIS, PROPHYLAXIS OR TITLE OF INVENTION: TREATMENT OF MYCOBACTERIOSES

FILE REFERENCE: 05394.0019

CURRENT FILLING DATE: 2003-08-19

PRIOR APPLICATION NUMBER: US/10/468,356

CURRENT FILLING DATE: 2002-02-22

PRIOR PILLING DATE: 2002-02-22

PRIOR APPLICATION NUMBER: 60/270,123

PRIOR PILLING DATE: 2001-02-22

NUMBER OF SEQ ID NOS: 655

SEQ ID NO 10

LENGTH: 586

TYPE: PRT

ORGANISM: Mycobacterium leprae

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                388

The present sequence represents a Mycobacterium tuberculosis protein. Products from the present inventon, which describes protein fragments and nucleic acid fragments derived from M.tuberculosis, can be used in the detection of and prevention of mycobacterial infections. In particular, the proteins and nucleic acids can be used for the diagnosis of or vaccination against tuberculosis caused by M. tuberculosis, M. africanum or M. bovis

New isolated mycobacteria polypeptides and nucleic acids - developing products for the diagnosis of or vaccination aga mycobacterial infections, particularly tuberculosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ž Š
The invention describes a substantially pure immunogenic polypeptide fragment (I) from Mycobacterium tuberculosis that is able to evoke a protective immune response against infections by mycobacteria belonging to the tuberculosis complex. The invention provides a (I) fusion polypeptide comprising at least one polypeptide fragment (I) and at least one fusion partner; (2) a fusion polypeptide fragment comprising a T-cell epitope from M. tuberculosis protein ESAT-6, or MPT59 and a second different amino acid sequence from M. tuberculosis, and/or including a sequence which protects the first amino acid sequence from in vivo degradation or post-translational processing; (3) a nucleic acid fragment that encodes the above polypeptides. The polypeptides and nucleic acid are useful as pharmaceuticals, for diagnosis of and as antigens for vaccination against TB caused by Mycobacterium tuberculosis, africanum or bovis. The polypeptides are also useful for diagnosing ongoing or previous sensitization in an animal with bacteria belonging to the tuberculosis complex. The invention also describes the use of CFP7A or CFP3OA or a T-cell epitope of for the induction of a strong immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Loca

                                        The present sequence is that of the Mycobacterium tuberculosis MTBN2 protein. This is 1 of 8 proteins, i.e. MTBN1-8 (see AAB19842-49), encoded by 8 open reading frames (see AAA89035-42) identified as being present in the genome of M. tuberculosis but absent from the genome of the BCG strain of Mycobacterium bovis. MTBN1-8 represent reagents that are useful in discriminating between M. tuberculosis and BCG and, in particular, for diagnostic methods which discriminate between exposure of a subject to M. tuberculosis and vaccination with BCG. The invention features these MTBN polypeptides, functional fragments of them, DNA encoding them, vectors, transformed cells, and diagnostic, therapeutic, and prophylactic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   epitope of for diagnosis of TB in a mammal by performing a DTH type skin test; use of CFP27, CFP30A, RD1-ORF2, RD1-ORF3, RD1-ORF5, MFT59-ESAT6, ESAT6-MFT59, CFP10A, CFP16, CFP19, CFP23, CFP25A, CFP30B, CFP7B or a T-cell epitope of for the preparation of an immunological composition; and for the preparation of a subunit vaccine
                                                                                                                                                                                                                                      Novel polypeptide encoded by open reading frames present in Mycobacterium tuberculosis genome and not by the BCG strain of M. bovis, useful as vaccine and for diagnosing tuberculosis infection.

                                                                                              The invention relates to a novel diagnostic reagent comprising a peptide epitope from a protein encoded by the RD1 or RD2 regions of the Mycobacterium tuberculosis, M. Bovis or M. africanum genome. The diagnostic reagents comprised within the kit are selected so that they are able to differentiate between M. Bovis, M. tuberculosis or M. africanum. The polypeptide or its variant or fragment tuberculosis or M. africanum. The polypeptide or its variant or fragment is useful as a medicament provided that the polypeptide is not a MPT-64 polypeptide or a polypeptide encoded by the RV1984c region of the M. Bovis, M. tuberculosis or M. africanum genomes. The nucleic acid which encodes the polypeptide or the diagnostic reagents can be used as a vaccine, especially against Mycobacterium infections. This sequence corresponds to a protein used to derive the peptide epitopes used in the
                                                                                                                                                                                                                                                                                                                                               New diagnostic reagents comprising a peptide having an epitope from polypeptides Rv1986, Rv3878, Rv1983, Rv3873 or Rv3879 derived from I and RD2 regions of Mycobacterium, useful as vaccines against Mycobacterium infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                뭐
                              tuberculosis and in preparing a vaccine against tuberculosis caused by civilent mycobacteria. The vaccine or immunogenic/ pharmaceutical composition can be used prophylactically in a subject not infected with a civilent mycobacterium, or therapeutically in a subject not infected with a virulent mycobacterium. The protein is useful for preventing, complex (M. tuberculosis, M. bovis, M. africanum). The nucleic acids may be used for effecting in vivo expression of the antigen, and in complex (M. tuberculosis in a subject already infected with a virulent mycobacterium of the antigen, and in complex (M. tuberculosis, M. bovis, M. africanum). The nucleic acids may be used for effecting in vivo expression of the antigen, and in complex the vaccine is an improvement of the living BCG vaccine presently available, where one or more copies of the living BCG vaccine presently cavailable, where one or more copies of the DNA sequence encoding one or microorganism to allow the microorganism to express and secrete the coplypeptide. Incorporation of more than one copy of a nucleotide sequence enhances the immune response. The present sequence represents an M.
                                                                                                                                                                                                                                                                                                                                                      The invention relates to a substantially pure polypeptide comprising an amino acid sequence selected from Rv0284, Rv0285, Rv0455c, Rv0569, Rv1195, Rv1386, Rv3477, Rv3878, Rv3879c or MT3106.1 (also disclosed are ORF13A and Rv0284ct), or their immunogenic portion, nucleic acids encoding them and an amino acid sequence analogue having at least 70% sequence identity to the polypeptide and is immunogenic. The protein is useful in preparing a pharmaceutical composition for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New Mycobacterium tuberculosis antigens, useful for diagnosing tuberculosis, and as a vaccine for treating or preventing infections caused by species of tuberculosis complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page 73-74; 111pp; English.

CC pharmaceutical composition comprising a fusion polypeptide having comprises after with BCG or to a person who has previously been vaccinated with BCG and are; (1) an immunogenic composition, vaccine or CC pharmaceutical composition comprising a fusion polypeptide which CC comprises two or more immunogenic composition, vaccine or CC pharmaceutical composition comprising a fusion polypeptide which CC comprises amino acid sequences encoding the fusion polypeptides selected CC from Ag85A, Ag85B, TB10.4, ORF2C, Rv0285, Rv0287 and Rv1036C, or CC comprises amino acid sequences encoding the fusion polypeptides selected CC from Ag85A, TB10.4, Ag85B, TB10.4-Ag85A, CC CRF2C-Ag85A, Ag85B-TB10.4-Ag85A, Ag85B-TB10.4-Ag85A, TB10.4-Rv1036, Ag85A-TB10.4-Ag85A, CC CRF2C-Ag85A, Ag85B-TB10.4-Ag85A, TB10.4-Rv1036-Ag85A, TB10.4-CRF2C-Ag85A, CC CRF2C-Ag85A, Ag85B-TB10.4-Ag85A, TB10.4-Rv0287-TB10.4, and their analogues; (2) a vaccine or CC pharmaceutical composition comprising a nucleic acid fragment, comprising a nucleic acid fragment, comprising composition polypeptide as mentioned; and (3) a method for immunizing and/or treating an animal, which has previously been immunized against tuberculosis caused by a virulent mycobacterium, comprising administering to the animal any of the compositioned, received to the animal any of the mentioned. The immunoceasic compositions or pharmaceutical compositions compositions are compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

New immunogenic compositions, vaccines or pharmaceutical compositions having a fusion polypeptide with antigens from Bacillus Calmette Guerrin (BCG) administered together with BCG.

Disclosure; SEQ ID NO 16; 85pp; English.

The invention relates to an immunogenic composition, vaccine or pharmaceutical composition comprising a fusion polypeptide having antigens from Bacillus Calmette Guerrin (BGG) administered to a person together with BGG or to a person who has previously been vaccinated wit BCG. Also described are: (1) an immunogenic composition, vaccine or pharmaceutical composition comprising a fusion polypeptide which comprises two or more immunogenic polypeptide, or its analogue, selecte from Ag85A, Ag85B, TB10.4, ORF2C, RV0285, RV0287 and RV1036c, or comprises amino acid sequences encoding the fusion polypeptides selecte from Ag85B-TB10.4, Ag85B-TB10.4-Ag85B-TB10.4-PR72C, Ag85B-TB10.4-PR72C, selected selected with

(MI) is useful for identifying adhesin and adhesin-like proteins for further testing in development of new vaccine formulations to eliminate diseases caused by various pathogenic organisms. (MI) is consisted to element of and urinary tract infections. (MI) identifies adhesins from consisting therapeutics for whooping cough, pneumonia, consisted the proteins. The present sequence is a microbial pathogen adhesin of migre proteins. The present sequence is a microbial pathogen adhesin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Computational method for identifying adhesin and adhesin like molecules, comprises computing sequence-based attributes of protein sequences using neural network software and training an artificial neural network.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sachdeva

                                                                                                                                                                                                                                                             cc nucleic acid; (2) a host cell containing the vector; (3) an isolated cc polypeptide or its fragment whose expression is inhibited by the cc antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular cc proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway crequired for proliferation, or that inhibits cellular proliferation; (8) cc identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required gene or its gene product the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a cc ompound's activity; (11) a culture comprising strains in which the gene cc product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the collection of contiferation of an organism. The antisense nucleic acids are useful for cellular proliferance or screening for homologous nucleic acids required control discovery programs, or for screening manufaction collection collection of collection of control of a control or callular proliferation to isolate candidate molecules for rational control discovery programs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated
                                                                                                                                                                                                                                                                                                                     drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                           Sequence 588
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2003-029926/02.
